Greetings,

I Know First Research Team have summarized for you the most recommended investment opportunities for the year 2023 coming from different asset classes and markets.

The assets featured in this report are discovered by our proprietary developed predictive algorithm powered by advanced artificial intelligence for a year ahead. Each of the asset predictions is described by two indicators:

Signal - represents the expected magnitude of asset movement (the number in the middle of the square). This value is an index developed by I Know First and it can be both positive (showing bullish expectation) and negative (showing bearish predictions)

Predictability - The predictability is the historical correlation between the past algorithmic predictions and the actual market movement for each particular asset. The algorithm then averages the results of all the historical predictions, while giving more weight to more recent performances. The index ranges from 0 to 1.

For a full explanation of the indicators please click [here](#).

Executive Summary:

I Know First is proud to present a special report that includes a one-time forecast for 2023. The special and one-time report includes interesting opportunities for 2023. The report includes our recommendations for a broad range of financial assets for a period of 12 months ahead: Recommended Stocks for the US Market; World Market Indices; ETFs; Commodities Market; Currency and Cryptocurrency Markets.

The stock market forecast is based on the most promising assets as well as the most recommended stocks identified by the algorithm for the coming year and it is recommended to hold them for the long term. The report is particularly significant in light of the unique investment opportunities that the algorithm identifies today in the background of the challenging macroeconomic environment of inflation, fluctuating interest rates, volatility in energy, cryptocurrency, and commodity prices, and the war in Ukraine.

The following passages provide I Know First overall market outlook on different segments of the financial market and articulate the best investment opportunities in 2023 according to our predictive algorithm powered by Artificial Intelligence and machine learning.

Disclaimer:

The views in this report are subject to change at any time based upon market or other conditions and are current as of January 5, 2023. While all material is deemed to be reliable, accuracy and completeness cannot be guaranteed. Please remember that all investments carry some level of risk, including the potential loss of principal invested. They

do not typically grow at an even rate of return and may experience negative growth. As with any type of portfolio structuring, attempting to reduce risk and increase return could, at certain times, unintentionally reduce returns. Keep in mind that, like all investing, multi-asset investing does not assure a profit or protect against loss.

No model or group of models can offer a precise estimate of future returns available from capital markets. We remain cautious that rational analytical techniques cannot predict extremes in financial behavior, such as periods of financial euphoria or investor panic. Our models rest on the assumptions of normal and rational financial behavior. Forecasting models are inherently uncertain, subject to change at any time based on a variety of factors and can be inaccurate.

Forecasting represents predictions of market prices movement and/or volume patterns utilizing varying analytical data. It is not representative of a projection of the stock market, or of any specific investment. Investment in global, international, or emerging markets may be significantly affected by political or economic conditions and regulatory requirements in a particular country.

Investments in non-U.S. markets can involve risks of currency fluctuation, political and economic instability, different accounting standards and foreign taxation. Such securities may be less liquid and more volatile. Investments in emerging or developing markets involve exposure to economic structures that are generally less diverse and mature, and political systems with less stability than in more developed countries.

Best S&P 500 stocks for 2023:

For 2023 our algorithm highlights the below S&P 500 companies as the most promising market opportunities in terms of company strength and potential growth this year:

Caesars Entertainment, Inc. (CZR) is a diversified gaming and hospitality company, revenues through gaming operations that include mobile, online gaming and sports betting.
